

RESEARCH INTEREST

I'm interested in artificial and machine intelligence with focus on language and speech processing. In particular, I'm enthusiastic about building efficient and robust speech recognition systems in low-resource and multilingual settings. I'm also interested in understanding the intricacies of human-machine interactions towards building intelligent multimodal dialogue systems. Presently, my research is focussed on exploring various approaches towards curating high-quality speech and language data resources that would enable research and development of language technology systems for Zambian languages.
